

SaaS Migration Overview

The current FMIS system is hosted in the Treasury server room and accessed via direct network connection. The platform in use is called Ci desktop.

Upcoming Transition

In October 2025, the system will migrate to a cloud-based service hosted by Technology One. This migration will transition the system to a Software as a Service (SaaS) model, allowing users to access it through an internet browser from any location.

Migration Step 1

The initial migration phase will introduce the Ci-Cloud platform, retaining the familiar user interface of Ci desktop but making it accessible through a web browser. Users will be able to access the system wherever there is an internet connection.

Migration Step 2

Post 2025, the plan is to transition fully to a web-based platform known as Ci Anywhere (CiA), further enhancing accessibility and streamlining operations.

Focus of This Document

This document focuses on Migration Step 1. It outlines the key operational differences between accessing the FMIS via the traditional desktop client and the new browser-based Ci-Cloud system.

Migration Structure
